Mike Kostenko

Java Software Engineer (Backend, Fintech)

contact@singledev.eu · +351 913 602 401 · linkedin.com/in/mike-kostenko · github.com/vopros21 · singledev.eu · Porto, Portugal · EU work authorisation

Summary

Java Software Engineer with 3+ years of backend and desktop development and 8 years in fintech at Devexperts (including 4+ years in QA). Oracle Certified Professional, Java SE 21. Core stack: Java 21, Spring, SQL/PostgreSQL, JUnit 5, Mockito, Swing, Git, CI/CD (GitHub Actions). Strong in testing, test performance and code review. Seeking senior backend roles, remote within the EU.

Work Experience

Java Developer, Devexperts – Porto, Portugal | Jan 2023 – Present

Developing and maintaining modules of a large-scale fintech platform across the lifecycle, from requirements to deployment.

> **Cut unit test suite runtime by 83% by introducing concurrent test execution (Java concurrency, JUnit).**

> **Wrote the team's troubleshooting guide for unit test failures.**

> **Extended the corporate-actions pipeline (dividends, splits) to persist data in the database via a new DAO layer, following the legacy codebase's patterns and Spring wiring.**

> **Added unit tests for candle subscription-symbol logic (CandlePrice/CandleAlignment) edge cases.**

- Analyse, estimate and implement backlog tasks; review pull requests for code quality and performance; support releases.
- Provide QA with functional context on code changes.

Internal platform: Parking Service | 2025 – Present

- Designed, built and operate the office parking booking system used by ~80 employees (~100 bookings/week): half-day slots, waitlist queue, Slack notifications, admin audit log.
- Migrated it from managed cloud hosting to a self-hosted company Linux VM with PostgreSQL; set up automated daily backups, off-site copies and a tested restore procedure.
- Introduced spec-driven, AI-assisted development (Kiro): requirements, design and task breakdown, with characterization tests before refactoring core booking logic.

QA Engineer, Devexperts – Porto, Portugal | Aug 2018 – Dec 2022

Ensuring quality and reliability of a complex fintech platform through structured testing and cross-team collaboration.

> **Increased test coverage by 15% through automated tests (Python, Bash), significantly reducing manual effort.**

> **Key contributor in a team that met all critical deadlines for product launches.**

- Wrote test cases and requirements docs, ran functional and regression testing, and automated QA tasks with Bash and Python.

Projects

HubitHab | iOS app | 2024 – Present | **Swift, SwiftUI, HealthKit, Spring Boot**

Automatic habit tracker: pulls activity from GitHub, LeetCode, HealthKit and X, with no manual logging.

PNCT Territories Map | Web app | 2026 – Present | **TypeScript, MapLibre GL, Vite, Python, Playwright, Cloudflare Pages**

Interactive map of Portugal's PNCT-eligible territories, with Idealista property-search links for each area.

Skills

Languages: Java (21), Swift, Groovy, Bash, Python
Frameworks: Spring, Spring Boot, REST APIs, Swing, SwiftUI, picocli
Web: Node.js, Fastify, React
Databases: SQL, Oracle SQL, PostgreSQL, MySQL, SQLite, Liquibase
Testing: JUnit 5, Mockito, TDD
Tools: Git, Maven, Gradle, Continuous Integration/Delivery (CI/CD), GitHub Actions, Linux, JIRA, Splunk, IntelliJ IDEA, Xcode
Practices: Agile/Scrum, Code review

Certifications

Oracle Certified Professional (OCP): Java SE 21 Developer – Oracle, Sep 2025
Courses: GitHub Actions, GitHub Foundations (Microsoft Learn); 100 Days of SwiftUI (Hacking with Swift)

Education

Master's degree – Rostov State University of Transport Communication

Languages

English (C1), Portuguese (A2)
