ABOUT

I work on **TOS**, a large-scale Java/Swing fintech trading platform at Devexperts. My strengths are backend and desktop Java, fast and reliable tests, and thorough code review — my QA background keeps me quality-minded. I'm looking for a **senior Java role**, remote within the EU, where I can grow towards architecture.

EXPERIENCE

Jan 2023 — Present

Java Developer · Devexperts, Porto

- Developing and maintaining modules within a large-scale fintech platform, working across the full development lifecycle from requirements to deployment.
- 83% Pioneered a concurrency solution in unit tests which decreased running time by 83%.
 - Documented the troubleshooting process in the main unit test area so that each team member could perform it efficiently and effectively.
 - Analyse and implement technical requirements for backlog tasks, estimating scope and duration based on size and complexity.
 - Implement code logic and provide the QA team with functional context on code changes to support effective testing.
 - Review team pull requests, focusing on code quality, performance, and maintainability.
 - Provide deployment support to ensure highest product quality.

Aug 2018 — Dec 2022

QA Engineer · Devexperts, Porto

- Ensuring quality and reliability of a complex fintech platform through structured testing and cross-team collaboration.
- +15% Increased test coverage through a comprehensive suite of automated tests, significantly reducing manual effort.
 - Key contributor in a team that met all critical deadlines for product launches.
 - Analysed and developed documentation: business/technical requirements, test cases and scenarios.
 - Collaborated with the QA automation team to adapt test cases, validate automated tests, and interpret results against functional requirements.
 - Executed functional testing for new features and regression testing cycles.
 - Developed Bash and Python scripts to automate routine QA tasks.

PROJECTS

IOS APP · 2024 — PRESENT

HubitHab

Automatic habit tracker: pulls activity from GitHub, LeetCode, HealthKit and X — no manual logging.

Swift

SwiftUI

HealthKit
